GUARANTEE OF GENUINENESS.

We guarantee our stock to be true to name. We exercise the greatest care to have our stock true to label. Should it occur, however, by accident or mistake, that some trees or plants prove untrue, we will cheerfully replace all such stock, or refund the money paid, after receiving proper proof thereof. It is mutually agreed, however, between the purchaser and ourselves, that we shall not be held liable for damages in such case further than the replacing of such stock, or refunding the money paid.

Announcement.

TO OUR TRADE: We have been engaged for many years in the Nursery business. The CEDAR HILL NURSERY AND ORCHARD COMPANY carries on a general Nursery business. The stock assortment is large, first-class and very complete, comprising the leading varieties in every department. These Nurseries are near the city of Winchester, Tenn., and our planting every year at this place covers several hundred acres. The land is particularly adapted to the growing of Nursery Stock, and all stock sent out may be depended on as thrifty and healthy.

We have the experience, ability and judgment to handle all business entrusted to the Company in a manner that will be found intelligent and satisfactory.

There is but one way to build up and hold a business, and this is by the fair and honest treatment of customers. We are thoroughly equipped for handling stock in the most satisfactory manner, and all orders will receive our careful attention.

We beg to call your attention to the accompanying Wholesale Price List, and ask that you give us your careful consideration when you make out your list of wants.

Yours very truly,

Cedar Hill Nursery and Orchard Company.

J. W. SHADOW, Proprietor.

REMARKS.

Each order is handled separately. After lifting, the trees are sent immediately to our large packing houses where they are graded and bunched under cover, exposure is reduced to a minimum and customers may depend upon receiving stock fresh, sound and in perfect condition.

Early Orders respectfully solicited. The forwarding season for fruit trees and deciduous plants commences by the 15th of October and lasts until the middle of March.

The prices quoted in this list are expected to apply only where the specified quantities are taken, except as follows, strictly: Where the order amounts to \$10 or over, 500 will be supplied at 1,000 rate; 50 at the 100 rate.

Cash, or satisfactory security, before shipment of stock. To parties well known to us to be prompt paying, we will give short time on part payment. Unknown correspondents are expected to remit with order, or before shipment.

The art of packing has, through years of experience, by a member of our firm, been mastered. Our packing house is under his personal supervision during the shipping season. Your goods will be properly packed in moss and will open to your satisfaction. First cost of materials charged only. Boxes 8 x 2 feet, \$2; 8 feet by 16 inches, \$1.75; smaller sizes in proportion.

It is not our ambition to be a low priced house, but we strive to grow stock that is first-class, to grade accurately, to have the handling and packing as good as the best, and sell at prices that will justify the production of first-class stock.

NUMBER OF TREES ON AN ACRE.

30 feet apart each way.....	50
25 feet apart each way.....	70
20 feet apart each way.....	110
18 feet apart each way.....	135
15 feet apart each way.....	205
12 feet apart each way.....	300

Rule—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill which, divided into the number of feet in an acre (43,560), will give the number of trees to the acre.

OCT 9 1916

APPLES.—LEADING VARIETIES.

The following varieties are the best of the older and well known sorts. We can furnish good, healthy trees, first-class in quality, at the following prices. E for early; S. for summer; A for autumn; W for winter:

CRAB APPLES.

Hyslop,
 Kentucky Red,
 Martha,

Red Siberian,
 Transcendent,
 Whitney's No. 20.

SELECT LIST OF APPLES.

May Yellow—Small, nearly round; pale yellow; pleasant sub-acid; very prolific and hardy, and very popular on account of its being the earliest apple. May.

Yellow Transparent—It ripens fully ten days in advance of Early Harvest. Size, medium; light, transparent lemon-yellow; smooth, waxen surface; flesh white, melting, juicy and excellent quality, and for an early apple an exceptionally good keeper and shipper. May and June.

Carolina Red June—Medium to large; oblong; conical; dark red, entire; flesh tender, with a mild sub-acid flavor; commencing to ripen early in June and continues six weeks. It is one of the best market varieties of all the early apples. For a table ornament and to please the children it has no equal.

Red Astrachan—Size, medium to large; bright crimson, covered with white bloom; an apple of great beauty and good quality; flesh tender, rich sub-acid, fine flavor; tree a good grower and productive. Ripens early in June.

Early Harvest—Medium to large, roundish, oblate; pale yellow, with a rich, sprightly flavor. A valuable old variety, quite a favorite with many. June.

Benoni—Medium, red, tender, juicy, productive. Ripens with Red June.

Duchess of Oldenburg—A beautiful Russian apple. Large; yellow, streaked with red. Very productive. August and September.

Tetofsky—Medium, yellow, striped red, acid.

Western Beauty—Large, roundish oblate, conical; greenish yellow, nearly covered with pale dull red, striped with darker shade and dotted with yellow specks; flesh white, tender, mild sub-acid. Season late July and August.

Summer Queen—Large, oblate, conical; pale yellow, with dull red stripes; rich, juicy and fine. July and August.

Horse—Large, yellow, occasional blush next to sun; sub-acid and good. A very popular old variety for cooking, drying and cider. July and August.

Buckingham—Very large; oblate conical; covered with red stripes and blotches on a greenish-yellow ground. The finest of the large autumn apples. August and September.

Carter—Medium, oblate; skin yellow, shaded and striped with red; flesh yellow, very tender, crisp and juicy, rich and aromatic; tree very prolific, luxuriant and a compact grower. September.

Beltzheimer—A rare German variety, very recently introduced. Fruit large to very large; skin pale green color mostly covered with purplish crimson; flesh white, firm, sub-acid, with a brisk, pleasant flavor. Tree a moderate grower, an abundant bearer, and as hardy as a crab. This is one of the largest and handsomest of apples, and promises to be extensively cultivated. September and October.

Sweet Bough—Large, pale yellow, tender, sweet.

Wine Sap—Medium; roundish conical form; mostly covered with red, on yellow ground; flesh fine, crisp, with a rich, high flavor. One of the best for cider, the dessert, or for general winter use. November to March.

Staymens—(Staymens Wine Sap). Medium to large; oblate conical; greenish yellow, mostly covered and indistinctly splashed and mixed with dull dark red, with medium numerous gray dots; flesh yellow, firm, tender, juicy, mild sub-acid, aromatic; quality best. Another seedling of Wine Sap, originated in Kansas; is larger, more beautiful.

Kinnard's Choice—Fruit medium to large, roundish oblate; skin yellow; almost covered with dark red or crimson; flesh yellow, fine grained, tender, rich juicy, almost aromatic; most excellent. No apple grown is of better quality. Tree vigorous and bears young; is thought to be a seedling of Wine Sap.

Sops of Wine—Medium, dark crimson.

Shockley—Medium; conical; skin yellow, overspread with bright crimson; flesh crisp, juicy, sweet and slightly vinous; tree very rapid and compact grower and early bearer, often bearing fruit the second year after transplanting; bears regular and abundant crops, and keeps until June; a very profitable market variety. October to June.

Yates—A Georgia variety. Small size; dark red and dotted with white dots; flesh firm, juicy, aromatic; a great bearer and good keeper.

Grimes' Golden—Medium to large; rich golden yellow; flesh tender, mild sub-acid; tree hardy, vigorous; an early and abundant bearer. October to February.

Arkansas Black—Fruit medium to large; fine flavor; beautiful dark color, almost black flesh, yellowish, slightly sub-acid, crisp; one of the best cooking apples; vigorous. November to March.

Ben Davis—Originated in Kentucky. Tree remarkably healthy, vigorous and an abundant bearer; fruit large, handsome, striped; flesh whitish, tender, juicy, sub-acid. A very profitable market variety; should be in every orchard. Keeps till mid-summer or later.

Longfield—One of the imported Russian varieties; a free, upright grower, early and abundant bearer, fruit medium to large, yellowish green, thickly covered with red stripes; a decided blush on the sunny side; rich, sprightly, sub-acid. December to March.

Red Siberian Crab—Quite small, a little over an inch in diameter; nearly round, with a brilliant scarlet cheek on a pale, clear, waxen-yellow ground; stalk very long and slender; tree very productive and bears when very young; quite ornamental. September to October.

Transcendent Crab—Fruit large for its class; golden yellow, with a beautiful, rich crimson cheek; when ripe the red or crimson nearly covers the fruit; flesh creamy yellow, crisp, sub-acid, pleasant and agreeable. This is truly a beautiful fruit; tree a rapid grower and productive. September.

Gano—Tree very healthy, vigorous, hardy, having stood 32 degrees below zero without injury. A rapid grower, large and spreading in orchard, fruit spurs numerous, shoots long and smooth, brown, with protuberances on the limbs like the Ben Davis. An early, annual and prolific bearer. Foliage large and dark. Season February to May.

Northwestern Greening—Large; yellow and rich; exceedingly hardy, and claimed to be an extra long keeper.

Jonathan—Fruit medium or small, roundish; skin yellow, nearly covered with dark or lively red; fine grained, very tender and finely flavored; tree slender and spreading, with light colored shoots. November to January.

Baldwin—Large, roundish, deep bright red; juicy, crisp, sub-acid, good flavor. Tree vigorous, upright and very productive of fair, handsome fruit; one of the best and most popular winter apple. January to April.

Sandusky, or Ball's Choice—This famous apple originated with Mr. Sandusky, of Giles County, Tenn. The original tree was a chance seedling and grew to an immense size and lived to be about 60 years old. It bore heavy crops every year and was loaded with fruit when blown down during a storm. The apples have been kept from November until June, in perfect condition. It is unsurpassed in quality, flavor and beauty and should be propagated by all who appreciate a long keeping winter apple in the South.

York Imperial—Medium to large; greenish yellow, nearly covered with bright red; flesh firm and juicy; vigorous grower and very productive; one of our best winter apples. November to March.

Stark—Large; roundish, greenish yellow; shaded light and dark; juicy, mild, sub-acid; valuable for market. December to May.

PEACHES.

One Year Old, on Native Peach Roots.

Notice—All of our peach stock is grown from wild pits, procured in the mountains of Tennessee, where Yellows, Rosetta, Root Knot or any disease incident to the peach is unknown. The trees will be stocky and well branched, with smooth bodies. "C" for Clingstone; "F" for Freestone, "S" for Semi-Clingstone.

SELECT PEACHES FOR COMMERCIAL ORCHARDS.

Alexander—Above medium; highly covered in clay soils, less in light soils; flesh greenish white, very juicy, vinous, and of good quality; adheres to the stone. Matures from May 25 to June 15. Trees are remarkably prolific, and bear very young; a most valuable market fruit. The following are either synonyms, or resemble Alexander closely: Alpha, Amsden, Arkansas Traveler, Brice's Early, Briggs' May, Cumberland, Gov. Garland, Honeywell, Hynes' Surprise, Musser, Saunders, Waterloo, Wilder, etc.

Chair's Choice—Large size; yellow; freestone; ripens five days earlier than Smock. Very promising. September.

Champion—Very large, white freestone, with red check; ripe about first of July; has a fine flavor and is said to be frost-proof and hence a sure cropper.

Crosby—Medium size; bright orange-yellow, streaked with carmine. On account of its beautiful color and fine quality it commands a ready sale in competition with the best standard market sorts. Claimed to be the hardiest of all peaches, fruiting regularly when all other kinds fail. Follows Alberta.

Crawford's Early—Large; yellow, with red cheek; flesh yellow, juicy and rich; a standard market variety. Ripe from 10th to 20th of July.

Crawford's Late—Similar to the above, but usually larger and two weeks later.

Early Rivers—Large to very large; pale, greenish white; flesh white, sub-acid, very vinous and juicy; of exceedingly delicate flavor; skin very thin. Matures June 15 to 25.

Early Tillotson—Medium; white, covered with red; melting, good; very prolific; a favorite market variety; stands shipping well. Ripe June 20 to 25.

Elberta—Large; yellow, with red cheeks; juicy and high flavor; flesh yellow; supposed to be a seedling of Chinese Cling. Ripe middle to last of July; an excellent shipping variety. No other peach has made such a name for shipping, and none is cultivated more extensively for the supply of Northern and Western markets. Orchards containing from 25,000 to 80,000 trees of this variety alone are now planted; this is sufficient evidence of its value.

Emma—Large, yellow, with red cheek; flesh yellow, firm, juicy; best quality. Ripe July 25 to August 5. Follows Elberta; an excellent market sort.

Kalamazoo—Medium size; yellow, shaded with red; juicy, rich, melting; highly esteemed in Michigan. Middle of September.

Yellow St. John—(May beauty); Large, roundish; orange-yellow, with a deep red cheek; juicy, sweet and highly flavored; flesh yellow. Ripens end of June to July 10.

Gold Drop—Large, good quality, hardy, profitable market sort; follows Crawford's Late.

Greensboro—Origin, N. C. A new variety, which has been extensively grown in North Carolina, and is claimed to be earlier and larger than Alexander.

Lemon Free—Almost lemon shape, pointed at the apex; color a pale lemon yellow when ripe. It is of large size, of excellent quality. Ripens after Late Crawford.

Henrietta (Levy)—The most magnificent yellow cling known, largest size, bright crimson, hardy, productive, sure bearer; always commands fancy price.

Lady Ingold—Resembles Early Crawford, but of better quality, and a few days earlier; superior for canning. Ripens 5th to 15th July.

Mathew's Beauty—A large yellow peach of the Smock strain, but of good quality; very showy and a valuable shipper. August 5 to 10.

Mountain Rose—Large; white, washed with carmine; flesh tinged pink, juicy, vinous, sub-acid and good flavor; very good. Ripens June 25, or immediately after Early Tillotson; an excellent early market variety.

Old Mixon—Large; white, with red cheek; juicy, vinous, and excellent. Follows Mountain Rose, or end of July to August 5.

Picquet's Late—Very large; yellow, with red cheek; flesh yellow, buttery, rich, sweet and of the highest flavor. Maturity from end of August to middle of September. Originated by Antoine Picquet, Esq., Belair, Ga. This seldom fails to produce a crop of fruit, and after thirty-five years' test is considered one of the most profitable late yellow peaches South and West.

Reeve's Favorite—Large; oblong; skin deep yellow, with orange cheek; flesh juicy and buttery; very sweet; good. Ripens July 15 to 20.

Stephens' Rareripe—A vigorous grower; comes into bearing very young, and yields immense crops. The fruit in appearance resembles an enlarged, high-colored Old Mixon Free. It begins to ripen with the last of the Late Crawfords and continues about three weeks. Freestone, white-fleshed, juicy and high flavored. Follows Elberta.

Stump the World—Very large; white, with bright cheek; flesh white, juicy and of good flavor; stands carriage well, and is a fine market variety. Ripens July 20 to 25, and lasts three weeks.

Susquehanna—Very large; yellow, with red cheek; flesh yellow, rich, juicy, and of high flavor. Unsurpassed for canning. Ripens end of July.

Sneed—Medium; creamy white, with carmine blush and mottling; flesh greenish white, fine-grained, juicy, sprightly, vinous, and adheres slightly to the stone. This peach has been cultivated in Tennessee and Mississippi for several years past, and proved remarkably free from decay. It is considered the best of the very early varieties; tree of thrifty growth and luxuriant foliage. Ripens May 20 to June 1.

Salway—Large, roundish; skin creamy yellow, with crimson red cheek in the sun; flesh deep yellow, juicy, melting, rich, sweet, slightly vinous; one of the best late peaches. September.

Snow's Orange—Medium to large size; yellow flesh, melting and juicy. Is being planted largely in Michigan for a market variety; its hardiness, productiveness, fine appearance, etc., combining to make it a profitable sort. September, North; August, South.

Triumph—Above medium; skin downy, dark orange yellow, nearly covered with dark carmine; flesh yellow half way to the stone, where it changes to greenish white, and adheres to the stone like Alexander; juicy, melting and slightly sub-acid; quality good. Matures with Alexander. The great value of this peach for shipping purposes is its yellow color and attractive appearance, it being the earliest yellow peach so far known, and has brought very high prices.

Thurber—Large to very large; skin white, with light crimson mottlings; flesh very juicy, vinous, and of delicate aroma; of exceedingly fine texture. Matures middle to end of July. A seedling of Chinese Cling, which it resembles in size and beauty, but perfectly free. This variety has seldom failed to yield a crop of fruit when other varieties failed, and is highly prized as a market sort by Western growers.

Amelia—Very large, conical; white, nearly covered with crimson; juicy, melting, vinous, sweet, and of high flavor. Too tender to stand long carriage, but excellent for home consumption. July 1 to 10.

Tinsley's Oct.—Large; dingy yellow and red stripes; flesh yellow, buttery, rich and sweet; quality best. Middle of August. Reproduces from the stone with slight variations.

Chinese Cling—Size large; creamy white, a blush cheek and crimson mottlings at base; flesh white, slightly red near the stone, melting, juicy, vinous, and of the highest flavor. It surpasses any of the varieties of same parentage maturing at the same season. Matures middle of July, and immediately follows Thurber, of which it is a fit companion.

Gen. Lee—Above medium, oblong; creamy white, with carmine wash; flesh very finely grained, melting, very juicy and of high flavor; quality best. July 1 to 10. Improved Chinese Cling.

Indian Blood—Large; dark claret, with deep red veins; downy; flesh deep red, very juicy, vinous and refreshing. Middle of August.

Ringgold—A form of Heath Cling, but larger and a little later.

STANDARD PEARS.

The cultivation of this noble fruit is extending as its value is appreciated. The range of varieties is such that, like apples, they can be had in good eating condition from June till early spring.

Two Years, on Well-branched French Roots.

SELECT LIST OF PEARS.

Flemish—Large, beautiful, juicy, melting, rich and fine; strong grower and good bearer; hardy everywhere. A very popular market variety. September and October.

Bartlett—Large size, often with a beautiful blush next to the sun; buttery, very juicy and high flavored. Tree a strong grower; bearing early and abundantly; very popular. Last of August and first of September.

Clapp's Fav.—A large fine pear, resembling the Bartlett, but without its musky flavor; pale lemon yellow, with red cheek; fine texture, melting, buttery, juicy, with a rich sweet, delicate, vinous flavor. Tree hardy and very productive; very desirable in all sections, and especially so where other varieties fail. July and August.

Early Harvest—Fruit is large golden yellow, with a fine red cheek; flavor poor, but it sells well in the market because of its size and color and earliness in ripening. June.

Lawson—Tree healthy, a strong grower; early bearer and a profitable sort; of splendid quality for a very early pear; it colors beautifully. Red cheek with yellow shading.

Osbond—Medium; yellow, with red cheek; half melting, mild and pleasant; fine flavor and excellent; a fair grower and productive. August.

Summer Doyenne—Small; melting; sweet; yellowish. Tree vigorous and productive. August.

Tyson—Rather large; bright yellow, with brown cheek; melting, sweet and delicious. September.

Wilder—Very early, resembling Summer Doyenne; claimed to be a good shipper for an early pear. Small.

Duchess d'Ange—Very large; greenish yellow, sometimes a little russeted; makes a beautiful tree. One of the best. October and November. Succeeds best as dwarf.

Anjou—A large, fine pear, buttery and melting, with sprightly, vinous flavor. Tree a fine grower and good bearer. One of the very best. October to January.

Garber—One of the Japan Hybrids; the best and handsomest of its class; earlier than Keiffer, larger and much better quality; free from blight; very hardy; immensely productive; bears young; excellent for canning and preserving, and sure to be planted largely as a market sort as its many excellent qualities become known. Season, September and October.

Howell—Large; light waxen yellow, with a fine red cheek; handsome, rich, sweet, melting, perfumed aromatic flavor. Tree an upright free grower, and an early and profuse bearer. Very hardy and valuable. September and October.

Buffum—Medium size; yellow, somewhat covered with reddish brown and russet; buttery, sweet and excellent; a stout and upright grower.

Seckel—Small; rich yellowish brown; one of the best and highest flavored pears known; productive. September and October.

PLUMS.

One and two Years on Peach.

The demand for Japanese plum on peach is growing. Trees are fine and will give satisfaction. Note special low prices.

SELECT LIST OF PLUMS.

Abundance or Yellow-fleshed Botan—Round, with pointed apex, but varies from quite round to sharply pointed. Skin yellow ground, heavily washed purplish carmine, and a darker cheek; flesh yellow, very juicy, sub-acid, with apricot flavor; quite firm; skin tough; clingstone; quality best; pit large. Maturity June 15 to July 5. We also have this variety under several numbers as received from Japan, all proving identical. One of the best early varieties, and valuable for Northern and Middle States. Carries well to distant markets. After fruiting this variety very extensively for twelve years we consider it the most desirable for shipping North and East. Fruit should be thinned, otherwise the size is reduced.

Sweet Botan—Large, obtusely conical; green nearly covered with dull purple; flesh firm, yellowish, somewhat coarse, and of good quality; freestone. Ripens from June 15 to July 15; very productive.

Burbank—In general characteristics resembles Abundance, or Yellow-fleshed Botan. Color cherry red, mottled yellow; shape usually more globular; flesh, flavor and quality identical, but its period of maturity here is from two to three weeks later, or middle to last of July. The tree is of very vigorous habit, slightly differing in foliage. Valuable also for Northern States.

Chabot—Two and one-half inches long by two inches broad; yellow ground, nearly covered with carmine-red; flesh orange-yellow, very solid, sub-acid; quality very good; clingstone. Maturity end of July. This is identical with Bailey of several growers.

Douglass (Synonyms: Munson, of Professor Bailey; Hytan-Kayo, of Texas growers). Large; pointed; dark, purplish carmine, with blue bloom; juicy, sweet; very good; clingstone. July 15 to 25. Exceedingly attractive as to color.

Ogon—Medium to large, round, golden yellow; flesh yellow, firm, sub-acid; quality good; freestone. June 15. Tree of vigorous growth; a good cooking fruit.

Red Nagate, or Red June—One and three-fourths by one and one-half inches; pointed; skin thick, purplish red, with blue bloom. Flesh yellow, solid, somewhat coarse-grained, juicy, sub-acid, with damson flavor; clingstone; quality good. Maturity 10th to end of June. Very prolific, showy and attractive in color. It ripens a week before Abundance, and is the earliest large-fruited market variety. Good keeper and has brought high prices.

Hale—Large, round; orange, overspread with red; flesh yellow, soft and juicy; slightly sub-acid, with delicious peachy flavor; cling. Ripens during August. Tree vigorous and very productive. Originated by Luther Burbank, who values it for its excellent quality and late ripening when good fruit is scarce.

CHERRY.

One and two Years—On Mahaleb.
